

GitLab CI/CD

GitLab CI/CD is the part of GitLab that you use for all continuous methods (Continuous Integration, Delivery, and Deployment). You can test, create, and publish your code using GitLab CI/CD without the need for any additional integrations or third-party apps.

Read more about **GitLab CI/CD** [here](#).

[Get started with GitLab CI/CD | GitLab](#)

What is Terraform?

Terraform is an open-source infrastructure as a code software tool created by HashiCorp. It allows users to define and provision data centre infrastructure using a declarative configuration language called HashiCorp Configuration Language (HCL).

Terraform is designed to manage the entire infrastructure lifecycle, from initial provisioning to ongoing changes and eventual teardown. It takes an immutable approach, reducing the complexity of upgrading or modifying services and infrastructure.

HashiCorp Terraform

[What is Terraform | Terraform | HashiCorp Developer](#)

[Terraform is an infrastructure as code tool that lets you build, change, and version cloud and on-prem resources safely...](#)

developer.hashicorp.com

In this tutorial, I have integrated **Terraform** with **GitLab CI/CD** and created various resources on **AWS**.

Prerequisite:

- **AWS & GitLab Account**
- An **access key** & **secret key** created in the **AWS**
- Basic understanding of **AWS**, **Terraform** And **GitLab CI/CD**.

Let's start with the project configuration.

■ Fill the details

Welcome to GitLab, srivardhan!

To personalize your GitLab experience, we'd like to know a bit more about you. We won't share this information with anyone.

Role

Devops Engineer

I'm signing up for GitLab because:

I want to move my repository to GitLab from somewhere

What would you like to do?

☒ Create a new project

Create a new project on GitLab. Store your files, plan your work, and collaborate on code.

☐ Join a project

Join your team on GitLab and contribute to an existing project.

Who will be using GitLab?

☒ Just me

☐ My company or team

Enables a free Ultimate + GitLab Duo Enterprise trial when you create a new project.

Continue

■ Create your first project

Create or import your first project

Projects help you organize your work. They contain your file repository, issues, merge requests, and so much more.

Getting started

To make it easy for you to get started with GitLab, here's a list of recommended next steps.

- Open cmd in local laptop to generate keys

- Generate keys

ssh-keygen

```
C:\Users\vvard>ssh-keygen
Generating public/private ed25519 key pair.
Enter file in which to save the key (C:\Users\vvard\.ssh/id_ed25519):
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in C:\Users\vvard\.ssh/id_ed25519
Your public key has been saved in C:\Users\vvard\.ssh/id_ed25519.pub
The key fingerprint is:
SHA256:WirI3uzhM032DSQDZq4y9GHVSSfgp8Q9LpLUhL/5FyA vvard@SRivardhan
The key's randomart image is:
+--[ED25519 256]--+
|      .+= .      |
|      o.= +      |
|      + *. *      |
|      + .+ *E..   |
|      ..oo=..S .  |
|      .ooo.+.* .  |
|      + =.+ + . .  |
|      .o B.o o . .  |
|      .o*.. . .   |
+-----[SHA256]-----+

C:\Users\vvard>
```

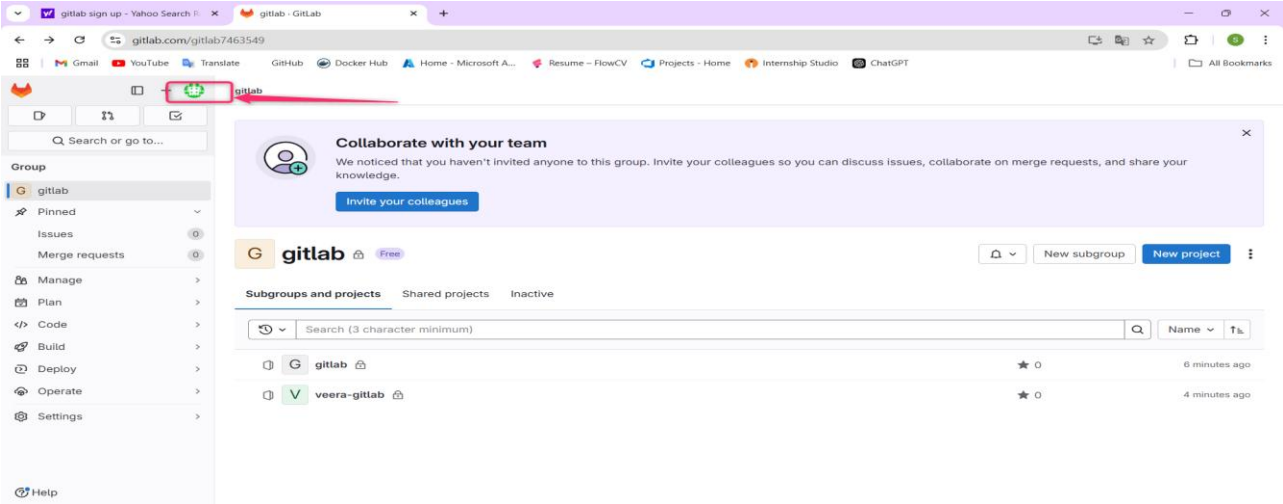

- These are ssh keys generated in users .ssh folder

Name	Date modified	Type	Size
id_ed25519	12/7/2024 2:09 PM	File	1 KB
id_ed25519	12/7/2024 2:09 PM	PUB File	1 KB

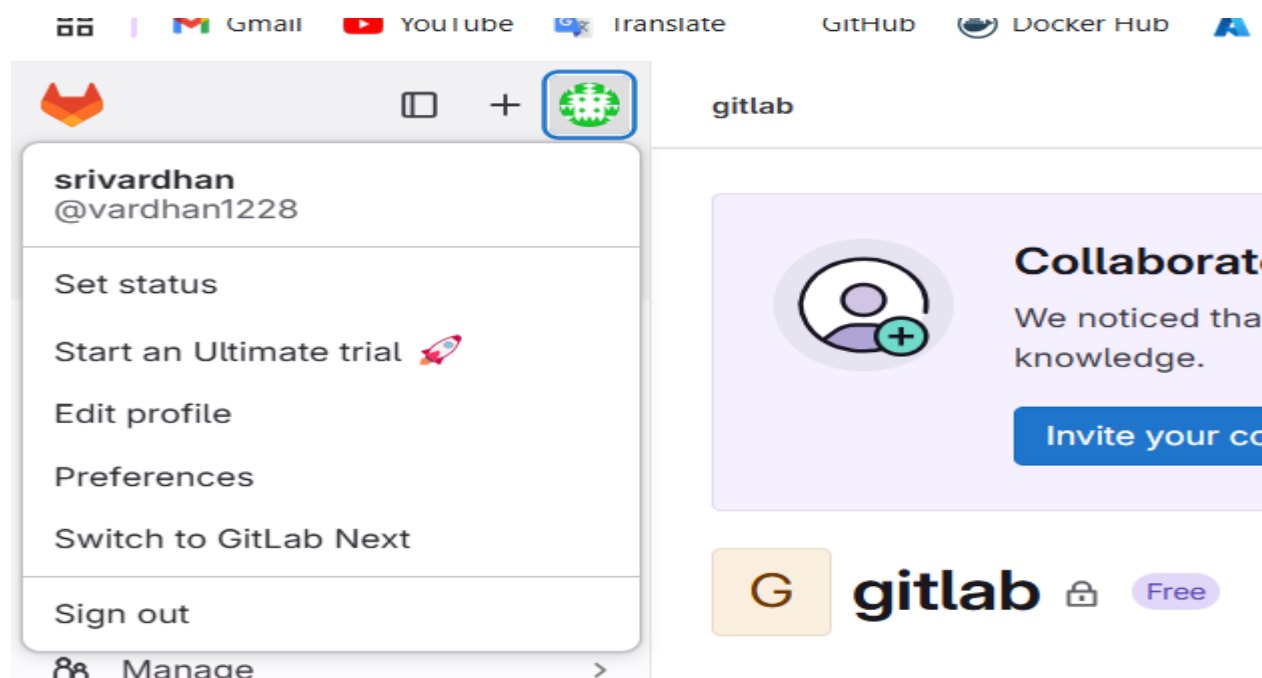

- Open the public key and copy it

```
ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAIH3vFY7Y7wu6Jmsg9D8wnj2nkFs1JcPGrji4Gdv2BvNG vvard@SRivardhan
```

- Click on profile symbol

- Click on Edit profile

- Click on ssh keys

Search or go to...

▼ Variables

Variables store information that you can use in job scripts. Each project can define a maximum of 8000 variables. [Learn more.](#)

Variables can be accidentally exposed in a job log, or maliciously sent to a third party server. The masked variable feature can help reduce the risk of accidentally exposing variable values, but is not a guaranteed method to prevent malicious users from accessing variables. [How can I make my variables more secure?](#)

Variables can have several attributes. [Learn more.](#)

- **Visibility:** Set the visibility level for the value. Can be visible, masked, or masked and hidden.
- **Flags**
 - **Protected:** Only exposed to protected branches or protected tags.
 - **Expanded:** Variables with `$` will be treated as the start of a reference to another variable.

CI/CD Variables </> 0 Add variable

Access key best practices & alternatives

Step 2 - optional
Set description tag

Step 3
Retrieve access keys

Retrieve access keys Info

Access key

If you lose or forget your secret access key, you cannot retrieve it. Instead, create a new access key and make the old key inactive.

✔ Access key Copied

Secret access key

AKIASG2VGLPFB4XTOV5I ***** Show

Access key best practices

- Never store your access key in plain text, in a code repository, or in code.
- Disable or delete access key when no longer needed.
- Enable least-privilege permissions.
- Rotate access keys regularly.

For more details about managing access keys, see the [best practices for managing AWS access keys](#).
