### For Loop :-

- 1. Write a Python program to print numbers from 1 to 10 using a for loop. Explain the difference between a for loop and a while loop in Python.
  - Write a Python program to calculate the sum of all numbers from 1 to 100 using a for loop.
- How do you iterate through a list using a for loop in Python? Write a Python program to find the product of all elements in a list using a for loop.
- Create a Python program that prints all even numbers from 1 to 20 using a for loop. Write a Python program that calculates the factorial of a number using a for loop. How can you iterate through the characters of a string using a for loop in Python?
- 9. Write a Python program to find the largest number in a list using a for loop. 10. Create a Python program that prints the Fibonacci sequence up to a specified limit using a for
- loop. 11. Write a Python program to count the number of vowels in a given string using a for loop.
- 12. Create a Python program that generates a multiplication table for a given number using a for loop.
- 13. Write a Python program to reverse a list using a for loop.
- 14. Write a Python program to find the common elements between two lists using a for loop.
- 15. Explain how to use a for loop to iterate through the keys and values of a dictionary in Python. 16. Write a Python program to find the GCD (Greatest Common Divisor) of two numbers using a for
- loop. 17. Create a Python program that checks if a string is a palindrome using a for loop.
- 20. Write a Python program to find the sum of all odd numbers from 1 to 50 using a for loop.
- 18. Write a Python program to remove duplicates from a list using a for loop. 19. Create a Python program that counts the number of words in a sentence using a for loop.
  - 21. Write a Python program that checks if a given year is a leap year using a for loop. 22. Create a Python program that calculates the square root of a number using a for loop.
- 23. Write a Python program to find the LCM (Least Common Multiple) of two numbers using a for loop.

1. Write a Python program to check if a number is positive, negative, or zero using an if-else

statement.

based on age using if-else.

If else:

- How can you use nested if-else statements in Python, and provide an example? Write a Python program to determine the largest of three numbers using if-else. Write a Python program that calculates the absolute value of a number using if-else.

2. Create a Python program that checks if a given number is even or odd using an if-else statement.

- using if-else. 9. Write a Python program to check if a number is within a specified range using if-else. 10. Create a Python program that determines the grade of a student based on their score using
- if-else.

Create a Python program that checks if a given character is a vowel or consonant using if-else.

7. Write a Python program to determine if a user is eligible to vote based on their age using if-else.

Create a Python program that calculates the discount amount based on the purchase amount

- 11. Write a Python program to check if a string is empty or not using if-else. 12. Create a Python program that identifies the type of a triangle (e.g., equilateral, isosceles, or
- scalene) based on input values using if-else. 13. Write a Python program to determine the day of the week based on a user-provided number
- using if-else. 14. Create a Python program that checks if a given year is a leap year using both if-else and a function.

15. How do you use the "assert" statement in Python to add debugging checks within if-else blocks?

16. Create a Python program that determines the eligibility of a person for a senior citizen discount

17. Write a Python program to categorize a given character as uppercase, lowercase, or neither using if-else. 18. Write a Python program to determine the roots of a quadratic equation using if-else.

19. Create a Python program that checks if a given year is a century year or not using if-else.

- 20. Write a Python program to determine if a given number is a perfect square using if-else. 21. Explain the purpose of the "continue" and "break" statements within if-else loops. 22. Create a Python program that calculates the BMI (Body Mass Index) of a person based on their
- weight and height using if-else. 23. How can you use the "filter()" function with if-else statements to filter elements from a list?

24. Write a Python program to determine if a given number is prime or not using if-else.

Map:-

1. Explain the purpose of the 'map()' function in Python and provide an example of how it can be

3. How does the 'map()' function differ from a list comprehension in Python, and when would you

4. Create a Python program that uses the 'map()' function to convert a list of names to uppercase.

Write a Python program that uses the 'map()' function to calculate the length of each word in a

used to apply a function to each element of an iterable.

## 2. Write a Python program that uses the 'map()' function to square each element of a list of

numbers.

list of strings.

Fahrenheit.

floating-point numbers to the nearest integer.

choose one over the other?

- How can you use the 'map()' function to apply a custom function to elements of multiple lists simultaneously in Python?

7. Create a Python program that uses 'map()' to convert a list of temperatures from Celsius to

Write a Python program that uses the 'map()' function to round each element of a list of

- Reduce:-
  - 1. What is the `reduce()` function in Python, and what module should you import to use it? Provide an example of its basic usage.

2. Write a Python program that uses the `reduce()` function to find the product of all elements in a

5. Write a Python program that calculates the factorial of a number using the `reduce()` function.

Create a Python program that uses `reduce()` to find the GCD (Greatest Common Divisor) of a list

### Create a Python program that uses `reduce()` to find the maximum element in a list of numbers. How can you use the `reduce()` function to concatenate a list of strings into a single string?

list.

of numbers.

integers.

integers.

list of strings.

letter from a list of strings.

specified threshold from a list of values.

number.

7. Write a Python program that uses the `reduce()` function to find the sum of the digits of a given

- Filter:-
  - 1. Explain the purpose of the `filter()` function in Python and provide an example of how it can be used to filter elements from an iterable. 2. Write a Python program that uses the `filter()` function to select even numbers from a list of

3. Create a Python program that uses the `filter()` function to select names that start with a specific

Write a Python program that uses the `filter()` function to select prime numbers from a list of

Create a Python program that uses `filter()` to select words longer than a certain length from a

# 5. How can you use the 'filter()' function to remove None values from a list in Python?

Write a Python program that uses the `filter()` function to select elements greater than a

Explain the concept of recursion in Python. How does it differ from iteration? Write a Python program to calculate the factorial of a number using recursion. Create a recursive Python function to find the nth Fibonacci number. Write a recursive Python function to calculate the sum of all elements in a list.

How can you prevent a recursive function from running indefinitely, causing a stack overflow

Create a recursive Python function to find the greatest common divisor (GCD) of two numbers

# 10. Write a recursive Python function to check if a string is a palindrome. 11. Create a recursive Python function to generate all possible combinations of a list of elements.

error?

using the Euclidean algorithm.

7. Write a recursive Python function to reverse a string.

1. What is a function in Python, and why is it used?

calls the function.

Recursion:-

**Basics of Functions:** 

Explain the difference between a function definition and a function call.

5. What is a function signature, and what information does it typically include?

Create a Python function that takes two arguments and returns their product.

Write a Python program that defines a function to calculate the sum of two numbers and then

How do you define a function in Python? Provide an example.

Create a recursive Python function to calculate the power of a number (x^n).

Write a recursive Python function to find all permutations of a given string.

**Function Parameters and Arguments:** Explain the concepts of formal parameters and actual arguments in Python functions.

2. Write a Python program that defines a function with default argument values.

What is the purpose of the `\*args` and `\*\*kwargs` syntax in function parameter lists? Return Values and Scoping:

How do you use keyword arguments in Python function calls? Provide an example.

Describe the role of the 'return' statement in Python functions and provide examples.

Write a Python program that demonstrates the use of global variables within functions.

2. Write a Python program that uses lambda functions to sort a list of tuples based on the second

Create a Python function that takes a list of numbers and a function as arguments, applying the

Create a Python program that uses the `reduce()` function to find the product of all elements in

Describe some best practices for naming functions and variables in Python, including naming

Explain the concept of higher-order functions in Python, and provide an example.

Explain the concept of variable scope in Python, including local and global variables.

Create a Python function that calculates the factorial of a number and returns it.

5. How can you access variables defined outside a function from within the function?

1. What are lambda functions in Python, and when are they typically used?

Create a Python function that accepts a variable number of arguments and calculates their sum.

# Lambda Functions and Higher-Order Functions:

function to each element in the list.

Function Documentation and Best Practices:

conventions and guidelines.

element.

**Built-in Functions:** 

a list.

Describe the role of built-in functions like `len()`, `max()`, and `min()` in Python. Write a Python program that uses the 'map()' function to apply a function to each element of a list.

How does the `filter()` function work in Python, and when would you use it?

- 1. Explain the purpose of docstrings in Python functions and how to write them.
